Sungur Zahid Erdim

AUTOMATION ARCHITECT

linkedin.com/in/sungurerdim | github.com/sungurerdim | Istanbul, Türkiye - Remote (UTC+3)

SUMMARY

I turn manual, messy processes into systems people actually adopt. Today I do it with AI agents. 12+ years of work, writing automation since 2013, across aviation, banking, optimization at a token-launch platform and AI coding agents.

RESULTS

- Airline: a Word/VBA tool cut a one-hour document check to 20 seconds *(180×)*. The department that owned the standard made it mandatory for all quality delegates.
- Token-launch platform: a snapshot system I rewrote alone went from 21+ hours to 1.8 minutes on one network *(about 700×)*. It was used for 20+ token sales, typically $200k-$900k each.
- Same platform: an influencer tracking tool cut monthly manual work *128 to 8 hours/month (16×)*.
- AI coding agents: on one benchmark task, agents passed 0 of 10 runs without rules and 10 of 10 with dev-skills when told to use them.

TECHNICAL SKILLS

CORE	Python · Bash · Linux · Docker · CI / CD · VBA (Word / Excel)
AI	LLM Tooling · AI Agent Frameworks · Benchmark Design · Whisper / STT · WER Benchmarking · Audio Preprocessing
SHIPPED W/ AI	Go · Rust · Dart / Flutter · FastAPI
WORKING KNOWLEDGE	pandas · NumPy · PyArrow
PROCESS	Bizagi · Workflow Modeling · Process Automation

EXPERIENCE

Automation Architect — Apr 2025 - Present

Independent - Remote

- Write and measure the rules AI coding agents follow. Published *dev-rules* and *dev-skills* (32 skills with quality gates), open source under MIT, used in my own daily work
- Benchmark, 10 runs per arm: no rules 0 of 10, dev-rules 4 of 10, dev-skills 10 of 10 when directed and 0 of 10 when left to choose. I reran an earlier 5-run result with 10 runs, found it inflated and corrected it
- Released: *fpstune* (v0.2.2), a Windows 11 gaming tuner that shows only numbers its instruments measured. A dry run over 475 settings exposed two defects in my own test harness; I fixed them before claiming anything
- In development: *dizgin*, a container-free sandbox for AI coding tools (Go), and *SafeScribe*, an on-device transcription app for iOS

Managing Director — 2024 - Present

Counseling Practice - part-time

- Set up the whole digital operation alone again when the practice was restructured: scheduling, spreadsheet bookkeeping, e-invoicing, cloud phone system, IT purchasing
- The systems are used by a team of 15–20 practitioners

Co-founder & Managing Director — 2020 - 2022

Counseling Practice - full-time

- Set up the whole digital operation alone at the founding: scheduling, spreadsheet bookkeeping, e-invoicing, cloud phone system, IT purchasing

Head of Optimization — Apr 2024 - Mar 2025

Seedify - Token-launch platform

- Rehired at the owner's request into a new company-wide role, which I ran alone
- Built an x.com influencer tracking tool in Python: monthly manual work *128 to 8 hours/month (16×)*
- Built a Telegram bot for user-submitted content: self-serve for KOLs, one-click structured reports for admins
- Connected Google Sheets, Calendar and Slack into a team notification system

Executive Assistant — Sep 2023 - Nov 2023

Seedify - Token-launch platform

- Built Google Sheets and Calendar API automations, as in every Seedify role

Project Manager

Feb 2023 - Sep 2023

Seedify - Token-launch platform

- Led 8 to 10 developers and handled the expectations of the CEO and COO

Blockchain Automation Specialist

Nov 2022 - Feb 2023

Seedify - Token-launch platform

- Scaled the snapshot system to three networks (BNB, Ethereum, Arbitrum), under 10 minutes together

Distribution Specialist

Apr 2022 - Nov 2022

Seedify - Token-launch platform

- Rewrote the stake and farm snapshot system as one Python script: 21+ hours to 1.8 minutes on one network. It reads contract history in block ranges, retries failed requests and fetches only new blocks
- Every balance comes from the announced time, so allocation follows the published rule. 20+ token sales, typically $200k-$900k each; the colleague who ran the snapshots dropped the old system
- Recovered the farm reward formula from contract code and taught it to the engineers who owned the code

Telegram Ambassador

Nov 2021 - Apr 2022

Seedify - Token-launch platform

- Part of a team that represented Seedify on Telegram and gave users technical support
- Recruited from the community after the team saw how I helped users. Wrote automations nobody had asked for; the later roles followed that work

Voluntary Developer

Aug 2018 - Jan 2020

EtherGem - Blockchain Project

- Docker and Bash automation to deploy, monitor and auto-update 250+ blockchain nodes
- The main job was keeping the system up: nodes kept dropping and needed manual intervention, and the community was not technically skilled

Process Improvement Specialist

Apr 2017 - Apr 2018

Albaraka Turk - Participation Banking

- Mapped workflows with business units and simulated them in *Bizagi*
- Automated the calculation cycle repeated in every analysis: hours of manual work became a one-click re-run

Specialist & QA Delegate

Aug 2014 - Mar 2017

Turkish Airlines - Catering and Inflight Products

- Encoded the standard's fonts, paragraph settings, heading hierarchy and numbering in a Word/VBA tool: one hour to 20 seconds. Made mandatory for all quality delegates
- Built a VBA rules engine that sorts cabin passenger complaints to the owning department

Open-source Linux installer script

2013

Earlier work

- 69 stars, 25 forks, 3 outside contributors

EDUCATION

M.Sc. Information Security Engineering - *Istanbul Sehir University* 2017

B.B.A. Business Administration - *Istanbul University* 2011

CERTIFICATIONS

Certified ScrumMaster (CSM) - Scrum Alliance (until 2025)

LANGUAGES

English (C2), Turkish (native)
